Audit Data

Resources Summary

Aggregates all network requests and groups them by type[Learn More](#)

Eliminate Render-Blocking Resources

Est savings of 300 ms

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. [Learn More](#)

Efficiently Encode Images

Optimized images load faster and consume less cellular data. [Learn More](#)

Enable Text Compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. [Learn More](#)

Serve Static Assets With An Efficient Cache Policy

30 resources found

A long cache lifetime can speed up repeat visits to your page. [Learn More](#)

Minimize Third-Party Usage

Third-party code blocked the main thread for 10 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. [Learn More](#)

Total Blocking Time

0 ms

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds.

Javascript Execution Time

0.1 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

Defer Offscreen Images

Est savings of 44 KiB

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. [Learn More](#)

Server Backend Latencies

70 ms

Server latencies can impact web performance. If the server latency of an origin is high, it's an indication the server is overloaded or has poor backend performance. [Learn More](#)

Properly Size Images

Serve images that are appropriately-sized to save cellular data and improve load time. [Learn More](#)

Reduce Unused Css

Est savings of 62 KiB

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn More](#)

Avoids Enormous Network Payloads

Total size was 662 KiB

Large network payloads cost users real money and are highly correlated with long

load times. [Learn More](#)

Minimizes Main-Thread Work

0.4 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

Avoid Chaining Critical Requests

15 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. [Learn More](#)

Avoids An Excessive Dom Size

150 elements

A large DOM will increase memory usage, cause longer [Learn More](#)

Avoid Multiple Page Redirects

Redirects introduce additional delays before the page can be loaded. [Learn More](#)

Minify Javascript

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn More](#)

User Timing Marks And Measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. [Learn More](#)

Network Round Trip Times

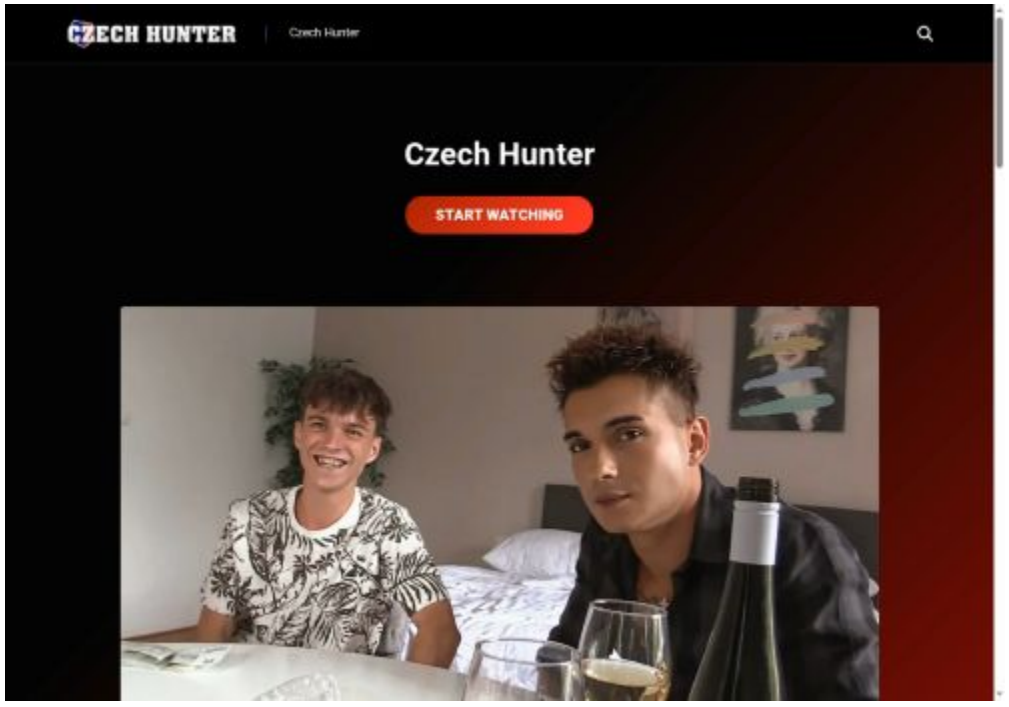

10 ms

Network round trip times (RTT) have a large impact on performance. If the RTT to an origin is high, it's an indication that servers closer to the user could improve performance. [Learn More](#)
